Brilliant Touch™ Suggested Colour Pairings:

The pairings seen to the left are the suggested colour choices from the Brilliant Touch™ design team. Each pairing has been chosen to provide maximum visibility to users, while meeting and exceeding the requirements of accessibility legislation best practices. While this list does not exhaust all available colour options, the pairings are among the most popular and effective. Other colour choices can be created using this chart, or the complete 3M vinyl chart. It is best to avoid complementary colours, such as red and green, as they do not provide maximum visibility. Also, allow for an obvious contrast between the two colour choices to maximize visibility.
