

INTERPRETIVE SIGNS & TACTILE MAPS

Accessibility

BrilliantTouch™ interpretive signs and tactile maps provide true accessibility in 'one sign for all'.

Sighted and visually impaired users alike can use the textures, contours and multi-layers to navigate any building or park. Interpretive signs with raised letters and graphics provide all the relevant information. No other system can give you this level of accessibility and compliance for interior or exterior locations. It's the perfect way to bring all the elements of your way finding program together.
